

Deposition data information (page 1 of 2)

Parameter	Remarks
pH of precipitation [-]	
El. conductivity of precipitation [$\mu\text{S}/\text{cm}$]	Precipitation samples were collected for a period of approx. 2 weeks. Deposition data values are written to the last day of the sampling period.
Element conc. in precipitation [mg/l]	Catchment average is the average value of a parameter based on all precipitation samples. Precipitation samples from different collectors were not mixed.
Element deposition [mg/m^2]	Element deposition data in [mg/m^2] was obtained by multiplying the catchment average element concentration [mg/l] by the catchment average rainfall [l/m^2].
